

Practical 4

- **Develop a simple application using React.js where a user can Add/Delete notes. Each note timestamped as well.**

Src/App.js

```
import './App.css';

import NoteApp from '../components/NoteApp';

function App() {
  return (
    <>
    <NoteApp/>
    </>
  );
}

export default App;
```

xyz

src/components/NoteApp.js

```
import React, { useState } from "react";
import "./NoteApp.css";

function NoteApp() {
  const [notes, setNotes] = useState([]);
  const [noteText, setNoteText] = useState("");

  // Handle adding a new note
  const handleAddNote = () => {
    if (noteText.trim()) {
      const newNote = {
        id: Date.now(),
        text: noteText,
        timestamp: new Date().toLocaleString(),
      };
      setNotes([...notes, newNote]);
    }
  };
}
```

```

        // timestamp for the note };
        setNotes([...notes, newNote]);
        setNoteText("");
        // Clear the input field after adding the note
    }    };

    // Handle deleting a note
    const handleDeleteNote = (id) => {
        setNotes(notes.filter((note) => note.id !== id));
    };

    return (
        <div className="App main">
            <h1>Notes App</h1>
            <div className="note-input">
                <input type="text" value={noteText} onChange={ (e) =>
                    setNoteText(e.target.value)} placeholder="Write a note..." />
                <button onClick={handleAddNote}>Add Note</button>
            </div>

            <div className="notes-list">
                {notes.length===0? ( <p>No notes yet. Add a note!</p>) : (
                    Notes.map ( (note) => (
                        <div key={note.id} className="note">
                            <p>{note.text}</p>
                            <small>{note.timestamp}</small>
                            <button onClick = { () => handleDeleteNote(note.id)}>Delete</button>
                        </div>
                    ) ) }
            </div>
        </div>
    ); }

```

```
export default NoteApp;
```
